### Parents' consideration for child vaccination, extubation of ventilated COVID-19 patients, thrombosis after Moderna vaccination

#### Peer reviewed journals featured:

- A rapid review on parents' considerations for vaccine uptake in children and adolescents [here](#)
- Observational studies on:
  - Early extubation with immediate non-invasive ventilation versus standard weaning in intubated COVID-19 patients [here](#)
  - Follow-up of recovered COVID-19 patients with mild disease [here](#)
  - A rapid near-patient detection system for SARS-CoV-2 using saliva [here](#)
- An editorial on thrombosis after Moderna vaccination [here](#)
- Commentary on:
  - The role of a federal strike team in the COVID-19 response in US nursing homes [here](#)
  - Maternal healthcare during disease outbreaks [here](#)

#### Letters and correspondence discussed:

- Trends in respiratory virus infections during COVID-19 in Singapore [here](#)

#### Pre-peer review articles featured:

- Reduced neutralisation of the Delta (B.1.617.2) SARS-CoV-2 variant following vaccination [here](#)

#### Guidance and reports

- The World Health Organization published:
  - A job aid for administration of AstraZeneca vaccine [here](#)
  - A fact sheet for health workers on AstraZeneca vaccine [here](#)

#### News and blogs

- A podcast on how COVID-19 exposed flaws in evidence-based medicine [here](#)
- The COVID-19 pandemic's lingering impact on clinical trials [here](#)
